

Customer Journey Map

Date	30 June 2026
Team ID	XXXXXX
Project Name	OptiCrop: Agriculture Production Optimization Engine
Maximum Marks	2 Marks

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Discovery & Landing	Stage 2: Data Input & Analysis	Stage 3: Recommendation & Decision
Actions <i>What does the customer do?</i>	- Discovers OptiCrop via search/referral and lands on the homepage - Browses the "Features" and "Learn More" sections to understand the tool - Decides to trust the platform and proceeds to "Get Started"	- Clicks "Start Soil Analysis" and enters N, P, K, temperature, humidity, pH, and rainfall values - Submits the form by tapping "Optimize Production" - Waits while the multi-algorithm ML model processes the inputs	- Reviews the recommended crop, reads supporting insights, and decides whether to act on it - Cross-checks recommendation against own farming experience - Plans next season's crop and resource allocation based on the output
Touchpoint <i>What part of the service do they interact with?</i>	- OptiCrop landing page (opticrop.onrender.com) "Architectural Highlights & Capabilities" content section "Start Soil Analysis" /	- Crop Feasibility Analyzer input form (Soil Nutrient Profile section) - Climatic & Environmental Factors input fields "Optimize Production" submit button	- Recommendation/ results screen - Feasibility/confidence insights shown alongside the recommendation - Option to "Reset Fields" and run a new analysis

	"Get Started" call-to-action buttons		
Customer Thought <i>What is the customer thinking?</i>	• "Can this app really tell me what to grow?" • "This looks data-driven and backed by machine learning." • "Let's see if this is worth my time."	• "I hope I'm entering these soil values correctly." • "This is asking for a lot of technical readings I may not have." • "I hope the system gives me an answer quickly."	• "Is this recommendation realistic for my land?" • "I want to know why this crop was suggested." • "This could really help me plan better this season."
Customer Feeling <i>What is the customer feeling?</i>	• Curious and slightly skeptical • Intrigued by the AI-powered promise • Cautiously optimistic	• Focused and a little uncertain • Mild friction if soil test data isn't on hand • Anticipation while waiting for results	• Hopeful and engaged • Reassured if the explanation is clear • Satisfied and confident if the recommendation feels accurate
Process Ownership <i>Who is in the lead on this?</i>	Marketing / Product Team (landing experience)	Product & Engineering Team (form UX, data validation)	Data Science Team (ML recommendation engine)
Opportunities <i>How can we improve this stage?</i>	• Add a short demo video or sample report to build trust upfront • Provide tooltips/help icons for each technical field • Explain the reasoning behind each crop recommendation	• Clarify what each metric means and where to find it • Add a progress indicator during multi-step input • Offer downloadable/sharea ble reports for farmers and advisors	• Allow simple, locally available proxies for missing soil data • Validate inputs in real time to reduce form errors • Add follow-up suggestions (inputs, irrigation tips) alongside the crop choice
