

Project Initialization and Planning Phase

Date	30 June 2026
Team ID	XXXXXX
Project Name	OptiCrop: Smart Agricultural Production Optimization Engine
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

I am	I'm trying to	But	Because	Which makes me feel
Farmer growing seasonal crops	Choose the right crop to plant	I don't have reliable data-driven guidance	Soil & weather factors are hard to assess manually	Uncertain about making the wrong crop choice

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A farmer growing seasonal crops.	Choose the right crop to plant based on soil and weather conditions.	I don't have reliable data-driven guidance on which crop suits my field.	Soil nutrients (N, P, K), temperature, humidity, pH, and rainfall all vary and are hard to assess manually.	Uncertain and anxious about making the wrong crop choice.
PS-2	A farmer trying to maximize yield with limited resources.	Use fertilizers and water efficiently for better productivity.	I often over- or under-use resources without knowing the ideal amount.	There is no easy way to match resource input to actual soil and crop needs.	Frustrated about wasted money and inconsistent yields.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-3	An agricultural researcher or policymaker.	Understand crop -environment relationships across regions to plan better policies.	Relevant data is scattered and not presented in an analyzable format.	There is no centralized platform that links environmental factors to crop outcomes.	Limited in making timely, evidence-based agricultural decisions.
