Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

Persona: Rithesh Reddy (Farmer)

Says - I never know exactly which crop suits my soil this season. - I want a quick way to check if my land is right for a crop. - Government advice is too generic for my specific field.	Thinks - If I pick the wrong crop, I could lose the whole season's income. - There must be a smarter way to use my soil test data. - Other farmers seem to get better yields - what are they doing differently?
Does - Manually checks soil N, P, K and weather before planting. - Asks neighboring farmers and local agri-officers for crop advice. - Adjusts fertilizer quantities based on guesswork or past habit.	Feels - Anxious about investing in the wrong crop. - Hopeful that data-driven tools could reduce uncertainty. - Overwhelmed by the number of environmental factors to track.
